

Project Play!

Page 1 of 4

March 2009 - issue 6

The all-new play environment at Wollongong Boat Harbour has greatly enhanced the entire area making it even more popular and is a major attraction for kids and parents alike!

Inspiration for the new play area was drawn from Wollongong's most important residents... **the children!**

Landscape Architect [Fiona Robbé](#) designed the area which includes the play area in conjunction with input from the children of nearby primary schools.

The children nominated their favourite activities and gave Fiona valuable insight into what would really

make this area special to them.

Then the historic character of the area and its links to the coal and fishing industries were woven into a design that has become a landmark for the region.

The playground is complemented with sandstone terraces, a beautiful promenade along the waterfront, eating areas and coordinated soft landscaping.

Project Play!

Wollongong Boat Harbour (cont)...

One of the interesting features of the play area is that although substantial in size it is barely visible from the nearby road.

This is important to the client, **Wollongong City Council**, as the precinct is an important part of the regions heritage and line of sight to the harbour needed to remain unimpeded.

The design makes clever use of natural, falling ground levels and the colours and shapes of the visible parts of the play structure give just enough clues that there is a treat in store if you stop and visit the area.

March 2009 - issue 6

Introducing *Kubbi*, allowing Mum's and Dad's to relax while their toddlers play!

This new play area at **Eltham Place Reserve** - designed by Jana Osvald of [Umbaco Landscape Architects](#) for Sutherland Shire Council, is a great example of how *Kubbi* can be used in a small suburban park.

Kubbi, which was developed with Jana's help for this small local playground setting, is the perfect blend of age appropriate play challenges with plenty of opportunities for role play and imaginative play.

Suitable for 2 to 7 year olds there are plenty of places for small people to "hide" and many games where they can interact with their parents or peers.

Beautiful flowing shapes and designs are instantly appealing to children and low level slides and climbers ensure that the age-appropriate theme is carried right through the range.

Moduplay Compact Swing

Introducing new Compact Swing and Junior Tot Swing...

Compact Swing and **Junior Tot Swing** have been released to provide you with more alternatives to the A frame swing sets.

Because of a smaller overall footprint and the simplicity of the design, they provide a perfect option when space and budget are tight.

Swings - Australian made by MODUPLAY

Moduplay Compact Swing also available in Triple and Quad format

Remember the good old-fashioned swings that took you so high you felt like you were flying?

More details on the design and unique location of these extra high swings in the next issue of Project Play.
